Q1. How many different candy types are in this dataset?

## nrow(candy)

[1] 85

85 candy types in this data set

Q2. How many fruity candy types are in the dataset?

```
sum(candy$fruity)
[1] 38
There are 38 fruity candies in the dataset.
     Q3. What is your favorite candy in the dataset and what is it's winpercent value?
candy["Kit Kat",]$winpercent
[1] 76.7686
My favorite candy is Kit Kat and its winpercent value is 76.7686
     Q4. What is the winpercent value for "Kit Kat"?
candy["Kit Kat",]$winpercent
[1] 76.7686
winpercent value is 76.7686 (That was not planned kit kats are actually my favorite)
     Q5. What is the winpercent value for "Tootsie Roll Snack Bars"?
candy["Tootsie Roll Snack Bars",]$winpercent
[1] 49.6535
library(dplyr)
Attaching package: 'dplyr'
The following objects are masked from 'package:stats':
    filter, lag
The following objects are masked from 'package:base':
    intersect, setdiff, setequal, union
```

```
candy |>
filter(rownames(candy)=="Haribo Happy Cola") |>
select(winpercent)
```

#### winpercent

Haribo Happy Cola 34.15896

```
candy |>
filter(winpercent > 50) |>
filter(fruity==1)
```

To get a quick insight into a new dataset some folks like using the skimer package and its

## skim() function.

# library("skimr") skim(candy)

Table 1: Data summary

Name	candy
Number of rows	85
Number of columns	12
Column type frequency:	
numeric	12
Group variables	None

## Variable type: numeric

skim_variable n_	_missingcom	plete_ra	ntmean	$\operatorname{sd}$	p0	p25	p50	p75	p100	hist
chocolate	0	1	0.44	0.50	0.00	0.00	0.00	1.00	1.00	
fruity	0	1	0.45	0.50	0.00	0.00	0.00	1.00	1.00	
caramel	0	1	0.16	0.37	0.00	0.00	0.00	0.00	1.00	
peanutyalmondy	0	1	0.16	0.37	0.00	0.00	0.00	0.00	1.00	
nougat	0	1	0.08	0.28	0.00	0.00	0.00	0.00	1.00	
crispedricewafer	0	1	0.08	0.28	0.00	0.00	0.00	0.00	1.00	
hard	0	1	0.18	0.38	0.00	0.00	0.00	0.00	1.00

bar	0	1	0.25	0.43	0.00	0.00	0.00	0.00	1.00	
pluribus	0	1	0.52	0.50	0.00	0.00	1.00	1.00	1.00	
sugarpercent	0	1	0.48	0.28	0.01	0.22	0.47	0.73	0.99	
pricepercent	0	1	0.47	0.29	0.01	0.26	0.47	0.65	0.98	
winpercent	0	1	50.32	14.71	22.45	39.14	47.83	59.86	84.18	

Q6. Is there any variable/column that looks to be on a different scale to the majority of the other columns in the dataset?

Yes, winpercent

Q7. What do you think a zero and one represent for the candy\$\text{chocolate column}?

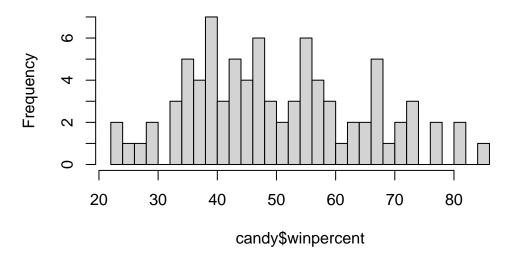

No chocolate in that column.

Q8. Plot a histogram of winpercent values

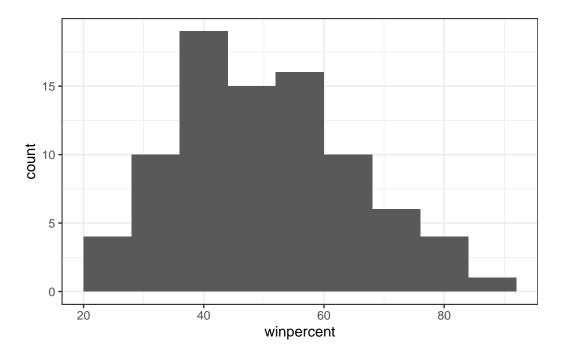

This can be done using the "base" in R hist() function or ggplot()

hist(candy\$winpercent, breaks=30)

## Histogram of candy\$winpercent

```
library(ggplot2)
ggplot(candy) +
aes(winpercent) +
geom_histogram(binwidth=8) +
theme_bw()
```

Q9. Is the distribution of winpercent values symmetrical?

No, the distribution is not perfectly symmetrical.

Q10. Is the center of the distribution above or below 50%?

```
summary(candy$winpercent)
```

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 22.45 39.14 47.83 50.32 59.86 84.18
```

The median is below 50% (47.8%) so the center of distribution is below 50%.

Q11. On average is chocolate candy higher or lower ranked than fruit candy?

On average chocolate candy is higher ranked than fruit candy.

```
fruit.candy <- candy |>
filter(fruity==1)
summary(fruit.candy$winpercent)
```

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 22.45 39.04 42.97 44.12 52.11 67.04
```

```
choc.candy <- candy |>
filter(chocolate==1)
summary(choc.candy$winpercent)
```

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 34.72 50.35 60.80 60.92 70.74 84.18
```

```
summary(candy[as.logical(candy$chocolate),]$winpercent)
```

```
Min. 1st Qu. Median Mean 3rd Qu. Max. 34.72 50.35 60.80 60.92 70.74 84.18
```

```
t.test(choc.candy$winpercent, fruit.candy$winpercent)
```

```
Welch Two Sample t-test
```

```
data: choc.candy$winpercent and fruit.candy$winpercent
t = 6.2582, df = 68.882, p-value = 2.871e-08
alternative hypothesis: true difference in means is not equal to 0
95 percent confidence interval:
    11.44563 22.15795
sample estimates:
mean of x mean of y
    60.92153 44.11974
```

P-Value < 0.05 (p-value = 2.871e-08) so it is statistically signifigant.

Q13. What are the five least liked candy types in this set?

The 5 least liked candies include Nik L Nip, Boston Baked Beans, Chiclets, Super Bubble, and Jawbusters.

```
play <- c("d", "a", "c")
sort(play)</pre>
```

[1] "a" "c" "d"

order(play)

[1] 2 3 1

play[order(play)]

[1] "a" "c" "d"

head(candy[order(candy\$winpercent), ], 5)

	chocolate	fruity	caramel	peanutyalmondy	nougat
Nik L Nip	0	1	0	0	0

Q15. Make a first barplot of candy ranking based on winpercent values.

```
library(ggplot2)
ggplot(candy) +
aes(winpercent, rownames(candy)) +
geom_col()
```

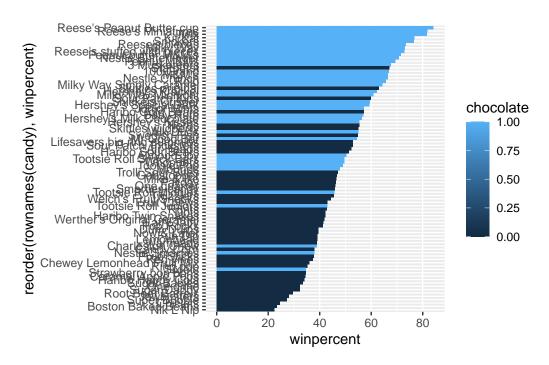

Q16. This is quite ugly, use the reorder() function to get the bars sorted by winpercent?

```
library(ggplot2)
ggplot(candy) +
aes(winpercent, reorder(rownames(candy), winpercent)) +
geom_col()
```

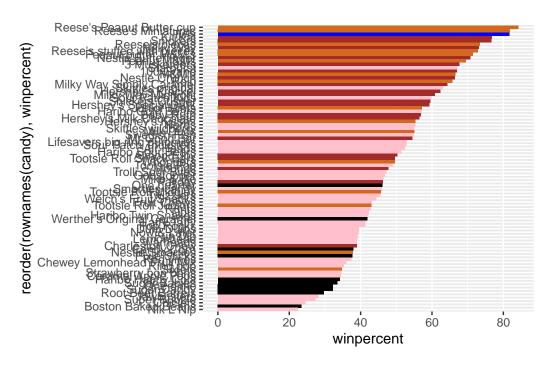

```
ggplot(candy) +
aes(x=winpercent, y=reorder(rownames(candy),winpercent),
fill=chocolate) +
geom_col()
```

```
mycols <- rep("black", nrow(candy))
mycols[as.logical(candy$chocolate)] <- "chocolate"
mycols[as.logical(candy$bar)] <- "brown"
mycols[as.logical(candy$fruity)] = "pink"
mycols</pre>
```

```
[1] "brown"
                 "brown"
                              "black"
                                          "black"
                                                       "pink"
                                                                   "brown"
[7] "brown"
                 "black"

```

Q17. What is the worst ranked chocolate candy?

The worst ranked chocolate candy is Sixlets.

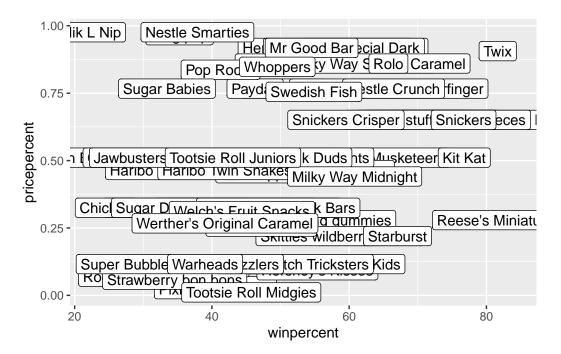

Q18. What is the best ranked fruity candy?

The best ranked fruity candy is Starburst.

```
mycols <- rep("black", nrow(candy))
mycols[rownames(candy)=="Twix"] <- "blue"
mycols[as.logical(candy$chocolate)] <- "chocolate"
mycols[as.logical(candy$bar)] <- "brown"
mycols[as.logical(candy$fruity)] = "pink"
mycols[as.logical(candy$fruity)] <- "red"
ggplot(candy) +
aes(winpercent, pricepercent) +
geom_point(col=mycols)</pre>
```

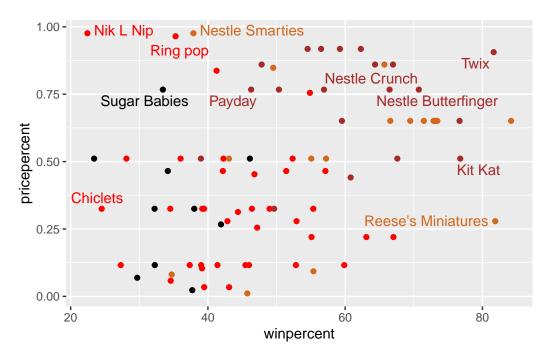

```
ggplot(candy) +
aes(winpercent, pricepercent, label=rownames(candy)) +
geom_point(col=mycols) +
geom_label()
```

```
library(ggrepel)
ggplot(candy) +
aes(winpercent, pricepercent, label=rownames(candy)) +
geom_point(col=mycols) +
geom_text_repel(col=mycols, max.overlaps = 5)
```

Warning: ggrepel: 74 unlabeled data points (too many overlaps). Consider increasing max.overlaps

Q19. Which candy type is the highest ranked in terms of winpercent for the least money - i.e. offers the most bang for your buck?

#### Reece's miniatures

```
ord <- order(candy$pricepercent, decreasing = TRUE)
head( candy[ord,c(11,12)], n=5 )</pre>
```

	pricepercent	winpercent
Nik L Nip	0.976	22.44534
Nestle Smarties	0.976	37.88719
Ring pop	0.965	35.29076
Hershey's Krackel	0.918	62.28448
Hershey's Milk Chocolate	0.918	56.49050

Q20. What are the top 5 most expensive candy types in the dataset and of these which is the least popular?

The 5 most expensive candies in the dataset are: Nik L Nip, Nestle Smarties, Ring pop, Hershey's Krackel, and Hershey's Milk Chocolate. The least popular is Nip L Nip.

#### corrplot(cij)

Q22. Examining this plot what two variables are anti-correlated (i.e. have minus values)?

Fruit and chocolate are anti-correlated.

Q23. Similarly, what two variables are most positively correlated?

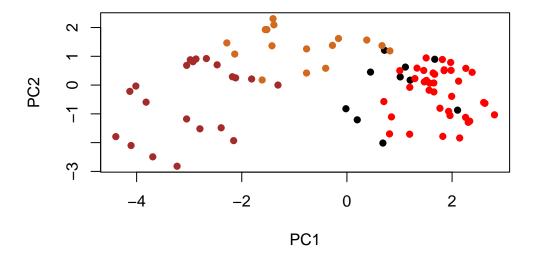

The two most positively correlated are chocolate and winpercent.

Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?

Fruity, pluribus, and hard are picked up strongly by PC1. This makes sense since the most popular candies are fruity and chocolate candies in bags and boxes.
